-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-3, 7, 11-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Vago et al (U. S. Pat. 5,020,512) in view of Trant et al. (U. S. Pat. 6,412,447).

Vago et al. shows a hot water heater comprising an inner casing 12 with water inlet 52, water out 54, an outer skin 31,32 spaced from the inner casing with thermal insulation 40, 42, , a gas fired combustion chamber 48 with a sealed bottom wall (at 36) and circumferential side wall 22, a fuel burner 50, combustion air intake ports 24, a support base 44, air intake openings 38, air passage means 104, air deflecting wall (at 102) which are arranged same as claimed. However, Vago et al. do not disclose a gas vapor sensor secured in relation to the support base below the sealed bottom wall and adapted to cause the burner to be shut off upon detection of explosive vapors. Trant et al. teach a water heater with a gas vapor sensor 54 for detecting the flammable vapors and adapted to cause the closing of gas valve and shutoff the burner gas supply same as claimed. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the water heater of Vago et al with a gas vapor sensor as taught by Trant et al. in order to improve the safety.

Allowable Subject Matter

3. Claims 4-6 and 8-10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

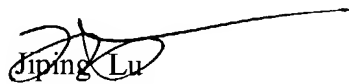

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Lesage (U. S. Pat. 6,662,757 & 6,666,174 & 5,836,554), Stretch et al. (U. s.pat. 6,497,200B2), Reynolds et al. (U. S. Pat. 6,230,665), Cacace (U. S. Pat. 6,578,531) all disclose a water heater with base support. Murphy (U. S. pat. 5,091,715) shows a leak detection and alarm system.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jiping Lu whose telephone number is 703-308-2354. The examiner can normally be reached on Monday-Friday, 9:00 AM - 5:30 PM.
